AJIL JOSE

Data Analyst | Data Engineer | Mutual Fund Operations | SQL | Python | Power BI | Tableau | Excel

ajiljose22@gmail.com | +91 95678 99254 | linkedin.com/in/ajil

PROFESSIONAL SUMMARY

Data analytics professional skilled in SQL, Python, Power BI, Tableau and Excel, with working knowledge of ETL pipelines, data validation and warehouse design. Brings 3+ years of finance operations experience in mutual fund processing and reconciliation, with 99% accuracy and strict regulatory compliance.

WORK EXPERIENCE

Data Analyst Intern — ROWS & COLUMNS July 2026 – Present

Kerala, India

- Handled end-to-end data preparation and analysis, including extraction, cleaning and manipulation of 5,000+ rows, using SQL and Python to deliver actionable insights.
- Built dimension tables and SQL views that consolidated multiple source tables into simplified, query-ready datasets for Power BI reporting.
- Developed interactive, multi-page Power BI dashboards using Power Query, data relationships, DAX measures and drill-down filters for in-depth business analysis.
- Strengthened dataset accuracy through systematic duplicate identification and validation checks.
- Designed and built a custom Excel inventory and procurement tracker using VBA automation, PivotTables and dynamic charts, streamlining stock monitoring and order workflows.

Senior Processor – Adjustments — RBC Investor Services Jul 2024 – Mar 2025

Toronto, Canada

- Reviewed and validated Letters of Indemnity (LOIs) for regulatory and internal control compliance.
- Resolved cash and trade discrepancies to support accurate fund-level reconciliations.
- Processed NAV-related adjustments with timely, accurate records.

Transaction Processing Administrator — RBC Investor Services Nov 2022 – Jul 2024

Toronto, Canada

- Processed mutual fund subscriptions, redemptions and switches affecting fund valuations.
- Supported daily cash and position reconciliations for accurate fund accounting records.
- Investigated transaction breaks to support timely NAV validation.

PROJECTS

EPL | ETL Pipeline & Analytics Project

Tools: Python, Requests, pandas, SQL Server, Power BI

- Built an end-to-end ETL pipeline to solve the challenge of converting raw EPL data into structured, reliable datasets for analyzing team performance, match outcomes and league standings.
- Extracted and processed 420 records (20 teams, 380 fixtures and 20 standings records) from a REST API using Python, Requests and pandas.
- Developed automated data transformation and validation, then loaded the data into a SQL Server staging layer and dimensional warehouse using fact and dimension tables, with fixture upserts and standings refreshes.
- Created SQL analytical views and a Power BI dashboard to track 1,115 goals, match outcomes, team performance and league standings; warehouse audits confirmed zero duplicate fixtures, missing fixture-team references or invalid standings.

Gym Data ETL Pipeline

Tools: Python, Requests, pandas, Matplotlib

- Built a paginated API pipeline extracting gym listings across 8 Kerala cities (57 requests, 1,092 raw records), with error handling for exhausted result pages.
- Deduplicated on place ID, cross-checked against name-and-address matching (200 duplicates by each key), and removed one record with no contact details, reducing 1,092 records to 891 (18%).
- Profiled data quality: 65% of listings lacked a website, 17% lacked a phone number and under 1% lacked ratings; exported a validated 891-row CSV.
- Aggregated listings, average rating, total reviews and reviews per gym by city, and visualized results in 3 Matplotlib charts.

Layered Data Warehouse

Tools: MS SQL Server, T-SQL

- Developed a Bronze–Silver–Gold data warehouse in SQL Server, integrating 6 CRM and ERP source files containing approximately 116K records.
- Automated data ingestion using SQL stored procedures, BULK INSERT, TRUNCATE, execution-time logging and TRY/CATCH error handling.
- Performed data cleansing and transformation using SQL, resolving duplicate and null customer records (18,494 → 18,484), standardizing attributes and correcting date, sales and pricing inconsistencies.
- Designed a Gold-layer star schema using fact and dimension views, surrogate keys and multi-source joins to deliver analysis-ready datasets.
- Implemented SQL data quality validation for primary key uniqueness, referential integrity, date validity and sales calculation accuracy.

Project Monitoring Dashboard
Tools: Power BI, DAX, Power Query

- Developed a Power BI dashboard integrating 9 tables to provide centralized visibility into project progress, expenditure, billing and risks.
- Built 20+ DAX measures to monitor project milestones, financial performance, bill approvals and risk resolution.
- Compared physical and financial progress to identify delivery–expenditure gaps, helping stakeholders prioritize delayed or underperforming projects.
- Implemented interactive filters, bookmarks, field parameters and project-level drill-downs to support faster project reviews and data-driven decisions.
- Optimized the data model and reporting logic to improve KPI consistency, data navigation and project performance tracking.

EDUCATION

Post Graduate Diploma, Logistics, Materials & Supply Chain Management — Lambton College, Toronto, Canada 2020 – 2021

- Dean's Honour List

B.Com, Accounting & Business Management — Kannur University, India 2014 – 2017

SKILLS

- **Data Analytics:** SQL (SQL Server, T-SQL, joins, CTEs, window functions), Python (pandas, Matplotlib, REST API extraction), Power BI (Power Query, DAX), Tableau, Excel, ETL/ELT, Bronze/Silver/Gold architecture, data validation, KPI reporting
- **Fund Operations:** Mutual Fund Operations, NAV Processing & Reconciliation, Letters of Indemnity (LOIs), Transaction Processing
- **Finance & Compliance:** Cash & Trade Discrepancy Resolution, Regulatory Compliance, Financial Reporting
- **Soft Skills:** Cross-functional Collaboration, Staff Coordination, Team Mentoring, Client Servicing
